

WELLNESS VISIT DISCLOSURE

Understanding Your Preventive Care Visit

A wellness visit (annual physical or preventive visit) is intended to focus on preventive care and overall health. Depending on your insurance benefits, preventive services may be covered differently from problem-focused services.

If you discuss or receive evaluation or treatment for a specific medical concern, symptom, chronic condition, medication issue, or other non-preventive problem during the same visit, that work may be billed separately and may result in additional patient responsibility such as a copay, deductible, or coinsurance.

EXAMPLES OF ISSUES THAT MAY NOT BE PREVENTIVE

- Chronic disease management
- New or existing symptoms
- Medication refills
- Review of abnormal test results
- Evaluation of a specific illness or injury
- Mental health concerns
- Discussion of treatment plans
- Other non-preventive medical issues

By signing below, I acknowledge that I understand the difference between a preventive wellness visit and a problem-focused visit, and that additional charges may apply when non-preventive issues are addressed.
